

About cookies

What is cookies?

A cookie is a small file that is sent from a website to your browser. A cookie cannot identify you personally, only the browser installed on your computer, tablet or phone with an internet connection that you use to visit different websites.

There are two main types of cookies, so-called persistent cookies that are stored in your browser for a certain period of time before they are deleted and which allow, for example, a website to recognize your device's IP address and thus your browser the next time you log in, and so-called session cookies that are temporarily stored in your device's memory while you are on a website so that it functions correctly during your use of the Services. Session cookies disappear when you close your browser.

How we are using cookies

Edlevo uses only strictly necessary **functional cookies** to give you a better experience. At login a temporary cookie, a session cookie, is created and stored on your device while you are logged in. The cookie is used to keep track of the permission of those who use the application. This is a **session cookie** and disappear when you close the application.

Edlevo is only using cookies as above, and are not using cookies for analysis or statistics, performance or functions such as sharing on social media.
